9-18-9 Foliar Fertilizer

9-18-9 is a highly refined foliar product. Due to its very pure ingredients, up to 94% can be absorbed and translocated throughout the plant (turf, trees, shrubs, vegetables, orchards or field crops) within 48 hours. Certified as a food supplement, it is completely safe.

Turf - 5 gals. per acre diluted 1:1 once per month while growing (6-8 times).

Ornamentals (Trees, Hedges & Shrubs) – Mix 1 part 9-18-9 to 100 parts of water and apply prior to and following blossom on flowering plants. On non-flowering plants, apply after pruning, or during July and September for trees.

Vegetables & Gardens - Mix 1 part of 9-18-9 with 50 parts of water and spray lightly every 2 weeks once there is enough foliage.

Additional Recommendations for a wide range of plants are available by contacting Nature's Pro, LLC.

Apply when leaf services are damp, not during the heat of a hot day. Always use hardness-corrected water (5 grains [87ppm] or less) and implement Soil Test Recommendations. To correct hardness, contact Nature's Pro, LLC.
